# AN INTEGRATED APPROACH TO EMERGENCY RESPONSE TRAINING.

Recognized as a leader in the safety services industry, DriveWise has worked with fire rescue, police service and EMT organizations across Canada training emergency personnel in safe driving practices.

## INTERACTIVE LECTURES:

Maximize student outcomes with Engage™, a proprietary learning model developed exclusively by DriveWise instructional designers. At the end of each learning module, participants are able to retain, recall and reuse information in both real world and simulated conditions.

Participants use advanced learning tools throughout the entire learning process, enabling instructors to engage, test and monitor student progress.

## STATE-OF-THE-ART VIRTUAL REALITY SIMULATION:

Simulation is one of the most effective ways to train new hires. It enables an individual to practically apply the classroom lessons without coming into harm's way. The PatrolSim offers emergency medical services personnel a high-fidelity, interactive training experience.

Classroom theory is immediately reinforced in the safety of a simulated environment.

## CUSTOM COURSEWARE:

DriveWise can build a training program based on your business objectives, or our instructional design team can conceptualize, build and deploy an effective, high-quality training program that complements your existing in-house courseware.
